Everything related to sand casting and 3D sand printing in one place!

AFS has combined the sand casting and additive manufacturing conferences into one big event! Now, you can hear leading experts tell their stories in a single venue. The conference will cover everything related to sand casting and sand printing. This event will focus on all technologies, metals and processes, and many case studies from founders who have successfully incorporated 3D printing into their sand casting process. Topics will include green sand casting in different molding media, green sand additives, chemically bonded molds and cores, sand testing, refractory coatings, processes and equipment for 3D sand printing, printed hard tooling for sand casting and environmental, health, and safety related issues.

The conference will include a tour of the 3D printing equipment and labs at the Milwaukee School of Engineering.
